

Don Lekei History

Since 1979, Don Lekei has been providing a wide range of technology solutions from custom hardware, firmware, and software design to product and business planning. Supplying, configuring, and servicing computers has been an ongoing service since 1998, when it did not violate any agreement with an employer, for example it was suspended from late 2005 to early 2013 to avoid competing with his employer.

Cadex C-2000 and C-4000 battery conditioner developed by Don.

People often look at technology in a historical vacuum. They think the latest idea will be the next hot item. Usually it takes an idea several tries before it truly succeeds. Those who learn from the past can see the future.

Don has been developing online applications, custom hardware and software designs, business planning, and computer service since late 1970s and founded his first consulting company, Cansoft Data Inc., in 1980.

technologies as BBS servers, Interactive voice/data messaging, satellite delivered data services, fax terminals, customizable browsers, multimedia satellite services... the list goes on.

Cyberexplorer, a product developed by Don in 1995 to help people connect to the Internet. Parts of the technology were licensed by Microsoft to promote the launch of Internet Explorer.

Microsoft even called on Don when they wanted to make Internet Explorer customizable for ISPs, OEMs, and other special cases.

In the 1990s Don was on the ISO/IEC standards committee which developed the JPEG and MPEG standards.

In the late 1990s he was responsible for ensuring internet email technologies worked on all platforms including original Mac, iMac and Windows PCs. Then at the turn of the century, he was responsible for the server technology for a network of dozens of web sites.

From a 1980 Cansoft Data Inc. promotional video showing Don Lekei (right) training a client on the use of a custom business application for the Commodore PET.

In late 2000, Don started Help-My-PC after seeing that the many people were struggling with the new wave of malware that was evading antivirus software. Then In 2005, he went to Future Shop and helped them launch their ConnectPro in-home services, leaving them to start Help-My-Tech in 2013.
